R&D PROJECT IMPLEMENTATION OF MEDICAL IMAGE PROCESSING, COMPUTER AIDED DIAGNOSIS AND CLINICAL DECISION SUPPORT INFORMATION SYSTEM AND APPLICATIONS DEVELOPMENT

SOFTNETA UAB together with its partner BALTIJOS INFORMACINIŲ TECHNOLOGIJŲ INSTITUTAS UAB receives an EU grant for the project No. J05-LVPA-K-01-0206 **“Medical imaging, computer aided diagnosis and clinical decision support information system and application development”** which is financed by the European Regional Development Fund (ERDF) under the Operational Programme 2014-2020 in accordance with European Union fund investment, 1st Priority “Reinforcement of research, development and innovation” under the notified measure “Intelektas. Joint business-science projects”.

The main aim of this project is to increase the company’s innovative potential in developing a new generation of medical imaging, computer aided diagnosis and clinical decision support information ecosystem and application solutions. Their commercialization will have a significant impact on the company’s competitiveness, not only in Lithuania, but also in the largest export markets in a medical information technology aspect. The project is in line with the company’s long-term goals and is directly related to the company’s knowledge about open minded innovative product development and innovation activity which is essential for the company’s business vision.

We seek to create a new generation of medical imaging and mapping information system, where not only medical image viewing and manipulation functions would be realized, but the CAD and clinical decision support functions as well. Unlike currently on the market available products, the software will be open, infinitely expandable and will perform computer diagnosis through both, images as well as clinical information, received from the healthcare information systems. This cannot be offered by none of the existing products on the market. Moreover, target customer of the product is a healthcare institution which will also help address one of the biggest challenges in the IT field of medical institutions - interoperability problem of different information systems.

The total value of the project: 823 000,22 EUR.

Softneta UAB and Baltijos Informacinių Technologijų Institutas UAB will invest 329 200,10 EUR, 493 800,12 EUR will be appointed by the European Regional Development Fund (ERDF).

Project begins: 2017-03-09.

Project ends: 2018-12-16.
